

**The All Season Solar Cooker has been used by campers for over 10 years.
Here is what they have to say:**

I love this cooker. I'm about 42 degrees north

Easy to assemble and also easy to take back down

This works great, even in fall when there is less sunshine and the sun's angle is lower in the sky

This cooker is amazing. Even on windy days when one would think the air would carry the heat away as fast as it is captured, our food cooks till it's done.

The temperature came up to 300 F

It reached a temperature of 296

The temperature reached 315 F

The temperature stayed above 250 F despite the atmospheric sun

It usually gets around 325 - 350 degrees within about 20 minutes

It works fine and was easy to figure out

[5.0 out of 5 stars](#)

This Solar Cooker might save Africa

I brought this solar cooker to Africa in 2009. It was easy to use and demonstrate to the women of eastern Congo (DRC) where I was volunteering at the time. I only wish I had more of these to distribute... They are easy to use and understand, efficient in their use of the sun and highly effective. I was able to cook many local favorites in my cooker like grains (rice), spinach (tshitekutaku), and "fufu" a local high energy bread. Don't be deceived by the price, they work, they are cost effective and they are easy to use and understand. If you can understand a sun dial, you can use this cooker, easily.

'WE LOVE THIS! I've made chicken, brownies, fish, rice, today I'll be doing biscuits

I've been using this cooker for over 9 years

The seller stands behind his product. The hardware was missing when I received it but it was sent out instantly when I informed him

Last summer I "lived" outside, cooking every day the sun was shining & I was home. I cooked multiple things most days. It fascinates me how it could be possible that such a thing [All Season Solar Cooker] could cook my food. I hardly ever even used the stove or oven in the house. Awesome.
